1. What four main classes do the large molecules of all living things fall into? Unlike lipids, carbohydrates, proteins, and nucleic acids are macromolecular chain-like molecules called polymers. 2. Explain the term "amphipathic". Amphipathic molecules have both a hydrophilic and a hydrophobic region. 3.

is the most thoroughly studied of all cell membranes, and it is largely through investigations of the plasma membrane that our current concepts of membrane structure have evolved. The plasma membranes of mammalian red blood cells (erythrocytes) have been particularly useful as a model for studies of membrane structure.
