Scar tissue: Causes, prevention, and treatment

What is scar tissue? Scars are marks on the skin or tissue of the body, which form after trauma and can affect skin, muscles, ligaments and tendons. As part of the body's repair process, new protein (collagen) fibers replace the injured tissue and a scar is formed.

Understanding Scar Tissue: What It Is + How To Care For It

A scar is an area of fibrous tissue that replaces normal skin after an injury. Scars result from the biological process of wound repair in the skin, as well as in other organs and tissues of the body. Thus, scarring is a natural part of the healing process. With the exception of very minor lesions, every wound results in some degree of scarring. An exception to this are animals with complete regeneration, which regrow tissue without scar formation. Scar tissue is composed of the same protein as

Scar - Wikipedia

A scar is a form of connective tissue that forms in the area of an incision, cut, area that has been worn away, etc. A problem that occurs due to scar tissue isn't actually due to the scar tissue itself, but to the fact that the area hasn't fully healed yet, and the scar tissue cannot function in the same way as the original tissue that was damaged.

What is Scar Tissue? (with pictures)

Abdominal adhesions are bands of scar tissue that form between organs and tissues in the abdomen. Symptoms of abdominal adhesions are infertility in women and chronic or severe pelvic or abdominal pain. Causes of abdominal adhesions are previous abdominal or pelvic surgery.

Abdominal Adhesions (Scar Tissue in the Abdomen)

Scar tissue forms after an injury to bodily tissues. If you cut yourself, have surgery, or tear tissue in the body, scar tissue will develop. The development of scar tissue is part of the normal healing process in the body. Collagen is a substance that is present in all of our body parts.

Scar Tissue Management in Physical Therapy

Scar tissue forms when the body undergoes trauma or inflammation of your cells and tissue. In some cases, scar tissues link to form an adhesion, which is a band of scar tissue. The adhesion connects two internal parts, which may restrict movement or hinder things like organs from performing their intended functions.
